

SUNKARI PRAVALLIKA DURGA

sunkaripravallik234@gmail.com | linkedin.com/in/pravallika-sunkari | github.com/notpravi25

SUMMARY

Second Year B.Tech Computer Science student specializing in Artificial Intelligence with an interest in learning through hands-on projects. Has worked on projects including a phishing detection model, Python-based applications, and basic web development, gaining practical exposure to programming and problem solving. Continuously building skills in programming, data structures, and software development through self-driven learning. Seeking an internship opportunity to further develop technical abilities and gain practical industry experience in a collaborative environment.

EDUCATION

Vignan's Institute Of Information Technology

2024-2028

Department of Computer Science and Engineering (Artificial Intelligence)

CGPA : 9.55

PROJECTS

Echo Walker (forest-light_) (HTML5 Canvas, Vanilla JavaScript, CSS)

[GitHub](#)

- Designed and implemented a real-time browser-based game from scratch using HTML5 Canvas and vanilla JavaScript, without relying on any external libraries or game engines.
- Built a multi-state enemy AI system (Idle → Investigate → Chase) and a dynamic sound-based visibility mechanic where player-emitted sound waves temporarily illuminate the environment and trigger enemy responses.

Smart Tab Manager (JavaScript, Chrome Extension API, Manifest V3, HTML, CSS)

[GitHub](#)

- Developed a Chrome browser extension using Manifest V3, leveraging the Chrome Tabs, Storage, Alarms, and Declarative Net Request APIs to provide real-time tab categorization and focus mode functionality.
- Implemented a URL-based keyword classification system that automatically organizes open tabs into contextual categories (Study, Work, AI, Entertainment), along with duplicate tab detection and domain-level bulk close.

Phishing Detection (Python, XGBoost, scikit-learn, Machine Learning)

[GitHub](#)

- Developed and evaluated multiple machine learning models for URL-based phishing detection, using an enhanced labeled dataset with visual model comparison outputs to assess relative performance across classifiers.
- Applied feature engineering techniques on URL-level data and produced comparative analysis reports, demonstrating an end-to-end understanding of the ML development and evaluation workflow.

SKILLS

Languages: Python, JavaScript, HTML5, CSS3.

Frontend: React 18, TailwindCSS, Vite, React Router, HTML5 Canvas.

Backend & Frameworks: Flask.

Data & ML: scikit-learn, XGBoost, Pandas, Data Visualization.

Browser & APIs: Chrome Extension API, Manifest V3, Chrome Tabs/Storage API, Declarative Net Request API

Tools & Platforms: Git, GitHub, Vercel, Google Colab, Jupyter Notebook, VS Code.

Concepts: Machine Learning, Feature Engineering, Model Evaluation, Basic Game Loop Architectures, REST API Design, Real-time Rendering, Browser Extension Development.
